Sri Venkata Sai Guru Inukurthi

srivenkatasaiguru@gmail.com | +91 8712903315 | linkedin.com/in/inukurthisaiguru | github.com/SaiGuruInukurthi

Summary

Full-stack developer with internship experience building production systems using Next.js, TypeScript, AWS, and SQL. Delivered internal dashboards, CMS tools, SEO improvements, and real-time web platforms in fast-moving startup and campus environments. Strong ownership mindset with experience leading student developer communities, organizing technical events, and shipping under deadlines.

Education

GITAM (Deemed to be University), Hyderabad, India — 2023 – 2027
B.Tech in Computer Science and Engineering — CGPA: 8.38/10.0

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C
Frontend: Next.js, React, Tailwind CSS, HTML5 Canvas API
Backend & Databases: Node.js, REST APIs, Supabase, AWS DynamoDB, PostgreSQL
Cloud & DevOps: AWS, Docker, GitHub Actions, Vercel, Linux
ML & CV: PyTorch, TensorFlow/Keras, YOLOv8, OpenCV, Scikit-learn, Hugging Face Transformers
Tools: Git, Streamlit, Jupyter Notebook, CUDA

Experience

Software Engineer Intern — AI Secure Solutions — May 2026 – Present
Video Analytics, Computer Vision, Next.js, TypeScript, Python, AI Surveillance Systems

- Contributed to the development of an enterprise Video Analytics (VA) platform used for real-time CCTV monitoring, event detection, and security operations.
- Participated in testing, validation, and performance evaluation of AI-powered video analytics features including object detection, tracking, and event-based alerting.
- Collaborated with cross-functional teams on product architecture, UI/UX improvements, deployment workflows, and technical documentation.

Full Stack Intern — Chitralai — Dec 2025 – Mar 2026
Next.js, TypeScript, AWS, DynamoDB, S3

- Built an internal analytics dashboard using live AWS data sources (DynamoDB, S3) to track subscriptions, uploads, organizations, users, and platform activity for leadership and operations teams.
- Developed interactive visual reporting modules including pie, bar, and trend charts for faster business monitoring and decision support.
- Built a role-based blog CMS with admin/editor access, rich text editing, image uploads, draft/publish workflows, and SEO controls for non-technical teams.
- Implemented SEO improvements across public pages including Home, Pricing, Blogs, FAQ, Terms, Privacy, and Campus Ambassador pages, contributing to a 20% increase in organic traffic over two weeks.
- Worked independently in a lean startup team, owning feature delivery end-to-end across frontend, backend integration, and deployment workflows.

Projects

WebUI Element Detection Model (YOLOv8) [GitHub]

- Fine-tuned YOLOv8m to detect web UI components such as buttons, forms, labels, and navigation elements from screenshots during a 12-hour hackathon.
- Trained for 100 epochs on a custom Roboflow dataset using PyTorch with CUDA acceleration.
- Built a Streamlit inference interface with real-time confidence visualization and image preprocessing pipelines using OpenCV and PIL.

Current Improvements:

- Building a large-scale custom dataset generation pipeline using Playwright to automatically capture and annotate web UI screenshots from real-world websites.
- Developing automated preprocessing workflows for UI element extraction, bounding box generation, and YOLO-format dataset creation.

Techscapades 4.0 — Real-Time Treasure Hunt Platform [GitHub]

- Built a real-time multiplayer QR-based event platform using Next.js 15 and Supabase for a campus-wide technical event.
- Implemented randomized clue logic, synchronized timers, admin controls, and anti-cheat workflows for concurrent participants.

Reinforcement Learning Dino Bot (NEAT) [GitHub]

- Built a NEAT-based reinforcement learning agent that learned obstacle avoidance from scratch within 20 generations using a custom state representation.
- Applied evolutionary neural networks with mutation, crossover, and speciation using neat-python in a Pygame environment.

Color Palette Extractor (Computer Vision) [GitHub]

- Developed a browser-based image analysis tool that extracts dominant color palettes from images up to 4K resolution.
- Used LAB color space and CIE94 color distance with Next.js, TypeScript, and Canvas API for efficient client-side processing.

Leadership

Vice President — GitHub Community GITAM Sep 2024 – Present

- Led planning and execution of 4 technical events reaching 200+ unique students with sessions focused on AI, Git, and developer tooling.
- Managed event operations including hosting, budgeting, team coordination, technical execution, and cross-club collaboration with the President.
- Delivered technical talks to audiences of up to 60 students.

Coding Team Lead — COGAAN Club Nov 2023 – Present

- Conducted technical workshops and student mentoring sessions focused on practical AI tooling and problem solving.
- Co-hosted a Prompt Engineering workshop attended by 57 students.

Achievements & Certifications

- **Top 3** — GITAM x Kodryx Hackathon (2026)
- **2nd Place** — Shore Fest ML Hackathon (2025)
- **Qualified** — CSE Hackathon Round 2 (2025)
- AWS Academy Graduate — Cloud Foundations
- Cisco Networking Basics
- MongoDB Certifications — CRUD Operations, AI Agents with MongoDB
- ServiceNow Micro Certifications — Welcome to ServiceNow, Flows
